

Tropical Plants For Interiorscapes

The Plant Professionals
INC

How might healthy green plants enliven your interior spaces? This guide features many of our current favorites. Plants are organized for easy reference, grouped by light required. Plants add so much to the spaces where we live, work, learn, eat, shop and relax.

We are happy to share our years of experience, skill and creativity to help achieve your goals for greening your space. We are constantly reaching for what is new and what is next. We are firm believers in the power of plants to clean the air, create a positive atmosphere, and add beauty to any setting.

Whether you are looking for the perfect succulent for a window sill, a specimen tree for a lobby, a curated collection for an atrium, or help creating an entire wall of green, we can help.

Don't forget to ask about the many lines of planters and green wall systems we carry, to create that perfect finishing touch.
